Chapter 1

Overview

The Facets Data Models Guide provides a complete set of Facets ERwin diagrams. These diagrams offer a high-level, logical view of the data in the Facets database, identifying the logical entities and relationships, associations and/or dependencies between those entities. These data models can be a valuable reference for customers in the areas of data analysis, validation, troubleshooting and for creating custom reports.

The data models are divided into the following domains:

- Accounting
- Auditing
- Billing
- Business Process Automation
- Capitation
- Case Management
- Catalog
- Claim
- Commission
- Criteria
- Customer Service
- Disability
- HIPAA Development
- HIPAA Privacy
- ITS Claim
- ITS Plan
- Managed Care
- Member/Subscriber
- NetworX Pricer
- Plan
- Provider
- System

- Taxes
 - Utilization Management
 - Vision
 - Workflow
-

Please note that while every attempt has been made to consolidate diagrams onto whole pages, certain tables had to be continued onto additional pages due to column length.

Chapter 3

Auditing Data Model

The key of an Auditing table is the same as the key of the table that is being audited.

Ex.

The key to the Facets
dbo.CMC_MEEL_ELIG_ENT table is
MEME_CK, MEEL_EFF_DT and MEEL_INSQ_DT.
The key for the audit.CMC_MEEL_ELIG_ENT
table would be the same.

The first part of the data portion of the audit table will contain a history block.

Ex.

HIST_ROW_ID
HIST_CREATE_DTM
HIST_USUS_ID
HIST_LOG_ACT_CD
HIST_PHYS_ACT_CD
HIST_IMAGE_CD
HIST_TERM_ID
TXN1_ROW_ID

The rest of the table contains all the columns from the data portion of the table being audited.

The installation of the main Facets database includes a stored procedure named (CERSP_AULS_AUD_LIST), which can be used to produce a list of database tables enabled for auditing.

This table will be used for reporting.
